# SomudTick grey box, GAME BOY layout - FRONT FACE (outside of the half with the 2 short posts)

the 2 short posts are at the BOTTOM now (turn the box round). Print at 100 % (Actual size). Check both 100 mm lines.

solid line = final size, dashed line = cut this first, + = centre (drill a 2.5 pilot there first)

blue = openings  red = M3 screws  green = speaker  gray = boards behind / posts inside  purple = looks only (no cutting)

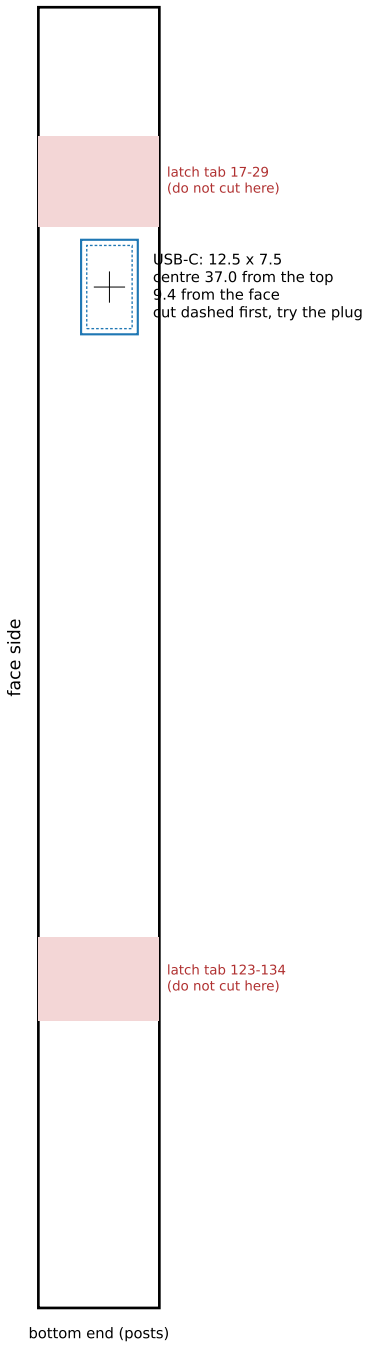

100 mm (check this one too)

100 mm (measure it: if it is not 100, the print is scaled - print again at 100 %)

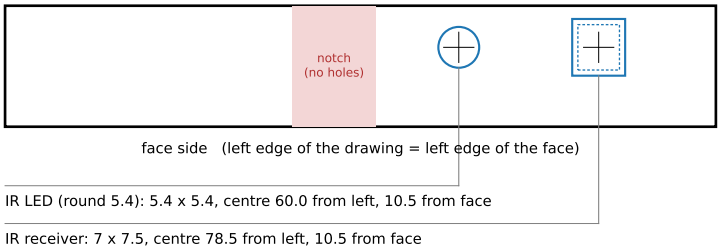

# SomudTick grey box, GAME BOY layout - WALLS of the front half (1:1)

z = from the FACE side edge. Every wall hole is under 15 mm (the halves meet at 16).

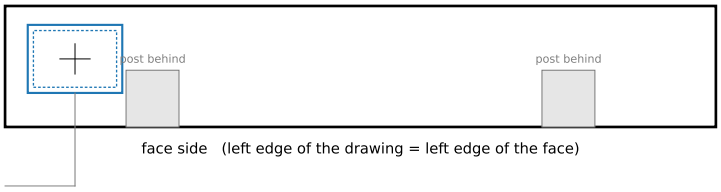

## LEFT wall

## TOP wall (screen end), seen from above

## BOTTOM wall (post end), seen from below

Box as measured: 94 x 172, closed 34.5. Front half 16 outside / 14 inside, back half 19 / 16.5.
Turned round from layout 4: the 2 short posts are at the BOTTOM now.

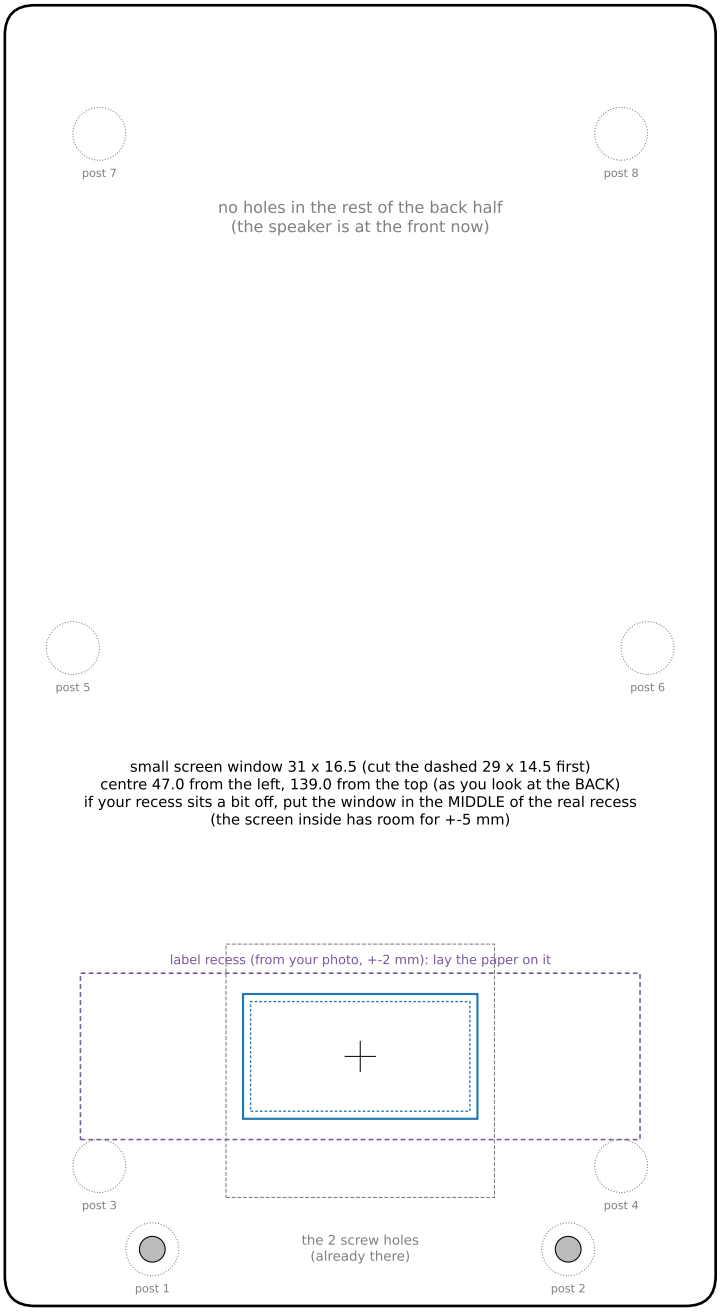

IR: drill these two LAST, after the IR boards are in, so the LED and the receiver sit right in the holes (bend their legs to the marks).
Switch: cut the dashed slot, push the switch in, file until it clicks in.
Back half: posts 7 and 8 do NOT need cutting in this layout.

**SomudTick grey box, GAME BOY layout - BACK HALF (seen from the BACK, outside)**

the end with the 2 screw holes is at the BOTTOM of this page. Only one hole: the small screen window.

100 mm (check this one too)

100 mm (measure it: if it is not 100, the print is scaled - print again at 100 %)
